What makes athenahealth's services different?

athenahealth helps physician practices to get paid more, faster, with less work and hassle by optimizing your workflow, evaluating productivity and monitoring cash flow.

With a growing network of more than 23,000 providers, athenahealth continuously researches and seeks out new insurance rules, builds them into their patented revenue cycle rules database, and makes them available to all clients on their network, resulting in fewer claim denials. athenahealth's Intelligence Team also tracks new government and Pay-for-Performance (P4P) rules to help make sure you receive the incentive payments you're eligible for. And while some vendors may send you software you need to update at your own time and expense, athenahealth constantly updates their software and rules database for you, giving you faster access to insurer coding changes – all free of charge.

Along with web-based software and a proprietary rules database, athenahealth offers back-office services to take on the bulk of your paper along with your most time-consuming work. All of your faxes, billing, and clinical documents are sent to athenahealth. They are scanned, prioritized and posted for clients in your clinical inbox. And athenahealth tracks and manages all of your claims and denials to help ensure you're getting paid what you're owed – when you're owed.
